Environmental policy

Blink Payment · Fidelity Payment Processing Limited · Version 1.0 · Effective from August 2026 · Next review August 2027

Our standpoint

Blink Payment makes payments simpler for businesses. We are a UK payment technology company and most of what we do happens in those offices and in the cloud. That means our direct impact on the environment is modest, but it is not nothing, and it is worth understanding and reducing where we can.

This policy sets out where we stand. It is a statement of intent and good practice, sized to match our business. We would rather commit to a handful of things we will actually do than publish targets we cannot stand behind.

Two commitments underpin the rest of this policy. First, we comply with all environmental legislation and regulation that applies to us; that is a minimum standard, not an ambition. Second, we expect to improve on what follows over time, and we review this policy each year with that in mind.

What this means in practice

We focus on the areas we control and can genuinely influence:

- **Hardware.** We reuse or responsibly recycle payment terminals and IT equipment at the end of their life, using licensed waste carriers and treatment facilities in line with the WEEE Regulations, rather than sending them to landfill.
- **Digital by default.** Our platform replaces paper-based payment and reconciliation processes, for us and for the businesses we work with.
- **Energy.** We keep energy use down across our offices where possible and choose efficient equipment and lighting.
- **Water.** Our water use is limited to normal office facilities, and we report leaks and waste to our building managers promptly.
- **Waste.** We reduce waste, recycle where we can, and cut single-use plastics and unnecessary printing.
- **Travel and working patterns.** We encourage lower-carbon travel when a journey is needed by providing benefits such as our Bike2Work scheme.
- **Partners and suppliers.** We consider environmental factors when we choose who we work with, and we prefer partners with credible, honest commitments of their own.

Where we are today

We think it helps to be clear about the scale of this. Blink Payment is a small UK company, so our footprint sits mostly in office energy use, business travel, hardware and the cloud services we buy. We understand where that impact comes from and we act on the areas we control, as set out above.

We also sit below the thresholds for mandatory environmental reporting in the UK, including Streamlined Energy and Carbon Reporting (SECR). We do not currently hold ISO 14001 certification or publish a measured carbon footprint, and our approach is deliberately proportionate to our size rather than absent. If our size, activities or obligations change, or a customer or partner needs something more formal, we will look at it and say so plainly.

Scope

This policy applies to Blink Payment, the trading name of Fidelity Payment Processing Limited, and to everyone who works for us, including employees and contractors, across both our offices.

Responsibility and review

Overall responsibility for this policy sits with our Chief Operating Officer, on behalf of Blink Payment's senior management team. Day-to-day responsibility for the practices described above sits with the managers of the areas concerned.

We review this policy at least annually, and sooner if our business, our offices or our legal obligations change. It is communicated to everyone who works for us as part of our internal policy set, and we make it available to customers, partners and prospective partners on request.
